ADVANZA COIN

ADVZ

Official Whitepaper - Version 1.0

Transparent digital value on BNB Chain

Official Website: coinadvanza.com
Network: BNB Chain
Official Contract: 0xa8F6d01e8028e0e3ac5e49cE0F85D3588059BAe0
Published: August 2026

1. Executive Summary

Advanza Coin (ADVZ) is a fixed-supply BEP-20 digital token deployed on BNB Chain. The project is structured around transparent on-chain verification, a publicly verified smart contract, multisignature treasury controls and public project communications.

ADVZ is being developed as the digital asset supporting the CoinAdvanza ecosystem. Current functionality is deliberately separated from planned ecosystem utility so future features are not represented as already available.

Core principles

- Publicly verifiable contract rules
- Fixed maximum supply
- Multisignature treasury security
- Public official channels and project documentation
- No guaranteed price, return or exchange listing claims

2. Project Vision

CoinAdvanza aims to develop a transparent blockchain-based ecosystem in which ADVZ can support digital access, community programs, platform integrations and other utility that may be introduced through a documented development process.

The project prioritizes verifiability over promotional claims. Material technical and operational information is intended to be communicated through CoinAdvanza.com and the project's official LinkedIn, X and Telegram channels.

Official channels

3. Blockchain Architecture & Token Specification

ADVZ is deployed on BNB Chain and follows standard fungible-token behavior compatible with common Web3 wallets and blockchain explorers.

Property	ADVZ Specification
Token name	Advanza Coin
Symbol	ADVZ
Network	BNB Chain
Standard	BEP-20 / ERC-20 compatible
Maximum supply	100,000,000 ADVZ
Decimals	18
Additional public minting	Not exposed by the current verified contract
Transfer / buy / sell tax	Not implemented by the token contract
Burn functionality	Supported
Official contract	0xa8F6d01e8028e0e3ac5e49cE0F85D3588059BAe0

Contract verification

The official ADVZ contract source has been publicly verified. Users should always compare any displayed token contract against the official address published in this whitepaper and on CoinAdvanza.com.

4. Tokenomics & Treasury

ADVZ has a maximum supply of 100,000,000 tokens. The verified token contract does not expose a public mint function for increasing that maximum supply and does not implement token-level buy, sell or transfer taxes.

No public ICO/IEO or private token sale was conducted at launch.

Treasury security

Project treasury security uses a 2-of-3 Safe multisignature approval structure. Treasury address: 0x0bFE4056091A4504a38F51c90292750B341989a8. Multisignature control reduces reliance on a single private key and requires multiple authorized confirmations for treasury execution.

Distribution policy

Project-held token movements are intended to remain visible on-chain. A finalized ecosystem allocation schedule will only be published after formal approval. Until that process is complete, the project does not represent unapproved allocation percentages as finalized tokenomics.

5. Utility Framework

Current functionality

ADVZ currently supports standard BEP-20 transfers, compatible wallet custody, transparent on-chain ownership, public blockchain verification and token burning.

Planned ecosystem utility

Future development may include access to CoinAdvanza services, community programs, ecosystem rewards, platform integrations and additional blockchain-based applications. Planned utility remains subject to development, testing, security review and applicable requirements.

No planned functionality described in this document should be interpreted as a guarantee that a feature will launch on a specific date.

6. Roadmap

Phase 1 - Foundation

ADVZ contract deployment; source verification; multisignature treasury implementation; official website launch; LinkedIn, X and Telegram launch.

Phase 2 - Transparency & Infrastructure

Publish whitepaper; expand security and treasury documentation; maintain regular public project updates; develop community channels and educational content; evaluate independent security review options.

Phase 3 - Ecosystem Development

Develop initial ADVZ utility integrations; evaluate wallet and platform integrations; introduce community-focused programs where appropriate; explore technology and ecosystem partnerships.

Future Development

Additional use cases may be introduced following technical, security and regulatory assessment. Material changes will be communicated through official project channels.

7. Leadership & Governance

Founder & Project Lead - T M G S Noor

The Founder & Project Lead is responsible for project strategy, ecosystem development, transparency, treasury oversight and coordination of the ADVZ roadmap.

Official LinkedIn project page: https://www.linkedin.com/company/coin-advanza/

Governance approach

Project operations emphasize documented decision-making, public contract verification, multisignature treasury security and publication of material project information through official channels.

8. Security & Transparency

Contract verification

Users can independently inspect the official contract and blockchain activity through BscScan.

Treasury controls

Treasury execution uses multisignature approvals. This design is intended to reduce single-key operational risk.

Impersonation protection

Only use links published on CoinAdvanza.com. The project will never request a wallet recovery phrase or private key. Users should verify addresses before signing transactions.

Independent review

The project may evaluate additional independent security-review or audit services as development progresses. No third-party audit is claimed in this version of the whitepaper unless separately published through official channels.

9. Risk Disclosure

Digital assets can involve significant risk, including price volatility, liquidity risk, smart-contract risk, wallet and key-management risk, cybersecurity risk, network risk and changing regulatory requirements.

ADVZ does not guarantee investment returns, token-price appreciation, liquidity, exchange listings, market adoption or completion of any planned future feature.

Users should independently assess risks, verify official information and obtain professional advice where appropriate before making financial or technical decisions involving digital assets.
